Deductive reasoning starts with an understanding of a general principle, then special cases help support that principle. Inductive reasoning works the other way around, where a special case is observed first, which leads to the eventual understanding of a general principle.

As the science of proof, Logic gives an account of the general nature of evidence deductive and inductive, as applied in the physical and social sciences and in the affairs of life. The general nature of such evidence: it would be absurd of the logician to pretend to instruct the chemist, economist and merchant, as to the special character of the evidence requisite in their several spheres of ...

Sections 1.1-1.3 Summary Inductive reasoning is a kind of logical reasoning which involves drawing a general conclusion, called a conjecture, based on a specific set of observations. In this process, specific examples are examined for a pattern, and then the pattern is generalized by assuming it will continue in unseen examples.

Inductive logic is more complicated and presupposes a grasp of deductive logic. That shouldn't be surprising: in a sense, deduction is just a special case of induction. A good inductive argument makes the conclusion likely to be true. If the premises guarantee that the conclusion is true, then that is maximally likely.

Surname 1 Student's Name: Professor: Course: Date: Chapter 6: Inductive and Deductive Reasoning The chapter begins by explaining inductive and deductive reasoning. In hindsight, deductive reasoning depends on logic, which combines all the premises to get the ultimate result, which is the outcome or solution. It uses an absolute fact to build its conclusion. However, inductive reasoning ...

In chapter 2 we will learn some precise, formal methods of evaluating deductive arguments. There are no such agreed upon formal methods of evaluation for inductive arguments. This is an area of ongoing research in philosophy. In chapter 3 we will revisit inductive arguments and consider some ways to evaluate inductive arguments.
