Sensor and Transducer Definitions. The words  
sensors and transducers are widely used in  
association with measurement systems. The  
sensor is an element that produces signals  
relating to the quantity that is being  
measured. According to Instrument Society of  
America, "a sensor is a device that provides  
usable output in response to a specified ...

State description of transducers The steady state description - reveals characteristics of transducers Note! No transducer is sensitive to one physical energy only Consider a small volume  $dV$  in which transducer is placed The energy content  $dW$  in this volume contains the summation of all possible energies  $I_i$  - intensive quantity (can carry power, e.g., force, pressure, voltage)
