captures his latest efforts to move from 2D vortex panel method to 3D vortex lattice method in the AVL code. By considering aircraft performance during various manoeuvres this approach is absolutely relevant to aircraft optimisation - even in a world where freeware CFD codes such as Open Foam make serious aerodynamic investigation available to projects on a limited budget.

Description. Flight Vehicle Performance and Aerodynamic Control is designed to serve as a text for either an 11-week or a 16-week course at the sophomore level. It explains typical methods used to estimate aircraft performance, the theoretical basis of these methods, and how various parameters derived from the aircraft geometry can be used to estimate the requirements of control surfaces and the aerodynamic forces required to actuate these surfaces.
